

## **Northwest New York Dairy, Livestock & Field Crops Program**

The NWNYS Dairy, Livestock and Field Crops Team is one of the outstanding regional agricultural Cornell Cooperative Extension programs in New York, serving a multi-county region in the western part of the state. The team's specialists work together with Cornell faculty and extension educators statewide to provide service to farms large and small; whether dairy, livestock, hay, corn, wheat or soybean focused. The team is part of the Cornell College of Agriculture & Life Sciences' Pro-Dairy program outreach.

Educational programs and individual assistance cover a wide area of best management practices as well as dairy farm business. A bilingual dairy specialist provides dairy farm producers with employee training and human resource facilitation in Spanish. Educational and support venues range from individual farm management team meetings and troubleshooting to multi-day classroom and hands-on trainings. Plus we offer farmer group discussion meetings and day long symposiums.

## **Cornell Vegetable Program**

The Cornell Vegetable Program (CVP) is one of the premier regional agricultural teams in New York: a partnership between Cornell University and Cornell Cooperative Extension associations in a multi-county region in the western and central parts of the state.

The team's Vegetable Specialists work together with Cornell faculty and Extension educators statewide to address the issues that impact the commercial vegetable industry. The CVP provides educational programs and information to growers, processors and agri-business professionals, arming them with the knowledge to profitably produce and market safe and healthful vegetable crops, as well as contributing to the viability of farms and the economic well-being of New York State.

Specifically, our program focuses on food safety, variety evaluation, market development, pest management, and cultural practices.

We encourage producers and agri-business professionals to enroll in our program to benefit from our educational offerings, including our newsletter, direct mailings and pest alerts.
