</table>

**Notes:**

- Guidelines for forage dry matter intake as % of body weight
  - Milking cows = 1.5 – 2.5%
  - Dry cows = 1.2 – 1.7%
  - Heifers = 1.2 – 2%

- Feeding loss – This needs to be reported to increase the quantity of forage required due to feeding losses. Values of 5 – 10% are reasonable.
- Calves < 2 months of age are usually fed little or no forage. However, they should be counted as a specific group and the number recorded rather than including them in the group < 12 months of age.
- Sample calculations are on the back of this worksheet.
Sample Calculations:
   a. 1,400 lb. dairy cow
   b. Forage feeding rate is 2% of body weight
   c. 100 cows in the group
   d. Planning period is 365 days
   e. Feeding loss = 5%

1. Daily forage dry matter intake/cow = (1,400 *2)/100 = 28 lbs.
2. Total forage DMI/cow for the total period = 28 *365 = 10,220 lbs. forage DM
3. Total forage DM/ tons/cow for the total period = 10,220/2,000 = 5.1 tons of forage DM
4. Tons of forage DM needed adjusted for feeding loss = 5.1 *1.05 = 5.36 tons of forage DM/cow
5. Group forage DM needs = 5.36 * 100 = 536 tons of forage DM for the 365 day planning period
