

# Soil Health Meeting: Residue Management

Cornell University  
Cooperative Extension

Wednesday, June 11, 2014

1—3PM

Jeff and Jason Jordan

County Highway 48, Oneonta, NY

Central New York Dairy & Field Crops Team and Cornell Cooperative Extension of Delaware County are sponsoring the second in a series of soil health meetings during the 2014 growing season.

Residue management is critical to no-till planting success and to improving soil health. The Jordan Brothers have planted no-till corn and soybeans for many years and this will be a chance to discuss the challenges they have faced in doing so successfully. This hands-on meeting will focus on measuring and managing residue and address related planter and pest issues. We will be looking at corn planted into corn and soybean stubble.

There is no cost and pre-registration is not required.

The meeting will be at Jordan's machinery building and drying bins on the south side of County Route 48 just immediately west of the I88 overpass. County Highway 48 can be accessed at I88 Interchange 13 (Rt 205), travel 2.5 miles west on County Highway 48 to the meeting site or from I88 Interchange 12, travel 3 miles east on County Highway 48 to the meeting site.

2 DEC Pesticide Recertification Credits  
approved for Categories: 1a, 10, or 21
